Gents:

Nice work, DOJ ... just as I expected.

I presume - since M\$ is the Feds own OS - with security weakness, code backdoors and never ending extensions designed and tested by the FBI, CIA and anybody with shiny, black shoes - much worse could have happened than slapping Bill Gates hand.

The Feds could have handed him Linux ... 'Course then SusE hardware drivers would work. Regarding the M\$/DOJ agreement, that, gentlemen is the level of my cynicism.
